

## Shoot for the Moon

### HOW-TO

1. Cut your pumpkin around the stem, remove the top, and scoop out the pulp. (Or to avoid visible cut lines, carve a hole out of the bottom of the pumpkin and remove the pulp that way.)
2. Print the template. Use a copier to resize the image if necessary, then center it on the pumpkin and affix with masking tape.
3. With an awl (\$3.39; [createforless.com](http://createforless.com)), punch the outline of the design through the pumpkin's flesh.
4. Remove the template and fit each hole with a bulb from a set of battery-powered string lights (\$4.50; [noveltylights.com](http://noveltylights.com)).
5. If you've removed the pumpkin's top, fit it back into place.
