

INVERSE IMAGE

Print both images—this image and the inverse image—onto 11"W x 17"L paper. Center the inverse image, face down, on your frame's glass and secure it with tape. Turn the glass over. One you've coated the glass with Krylon Looking Glass paint as directed (leaving the area around the hand and face unpainted) and let it dry, remove and discard the tape and inverse image. Before hanging, center the final image, face down, on the painted side of the glass; checking it's position from the opposite side. Note: Don't tape it in place to avoid damaging the paint.
